Art Unit: 2634

DETAILED ACTION

Election/Restrictions

1. Newly submitted claims 19-21 directed to an invention that is independent or distinct

from the invention originally claimed for the following reasons: Claims 19-21 refer to a signal

processing system which comprises of a radio frequency converter, a multiplexing circuit, a

demultiplexing circuit, and a control circuit for controlling the signal processing system. The

originally claimed invention also refers to a signal processing system; however, the claims of the

originally claimed invention of a signal processing system do not recite the limitations of a radio

frequency converter, a multiplexing circuit, or a control circuit for controlling the signal

processing system separately or in combination. Therefore the combination of these limitations

in the newly submitted claims creates a signal processing system or circuit that is independent or

distinct from the originally claimed invention.

Since applicant has received an action on the merits for the originally presented

invention, this invention has been constructively elected by original presentation for prosecution-

on the merits. Accordingly, claims 19-21 are withdrawn from consideration as being directed to

a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

Page 2

Application/Control Number: 09/579,596

Art Unit: 2634

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 4-7, 11-13, 15, 17 and 18 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claims 4-7 and 11-13 recite the claim limitations "means for distributing the input signal to one of two or more channels" and "means for combining the signals output by two or more said processing means". Claim 15 recites the limitations "a distributor for distributing said input signal to one of two or more channels" and "a combining circuit for combining the signals".

Claim 17 recites the limitations "a distributor... for distributing the input signal" "a demultiplexer connected to the outputs of each IF filter for combining the signals output by each of the IF filters". Claim 18 recites the limitation "a distributor for distributing said input signal".

However, after reviewing the specification (Fig. 1, block 50, Fig. 2, blocks 80 and 110, pages 5-9), it is the understanding of the examiner that the means for distributing /distributor of this application refers to a multiplexer; and the means for combining/combining circuit of this application refers to a demultiplexer as recited in claim 17. However, it would have been obvious to one skilled in the art at the time the invention was made that it is well known in the art that a demultiplexer is used to separate (distribute) signals, not combine signals; and a multiplexer is used to combine signals, not distribute signals (see Citta et al., U.S. Patent No. 5, 636, 251).

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2634

5. Claims 4-6 recite the limitation "said mixing circuit" in claim 4. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claim 17 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al. (previously cited in Office Action 1/21/04) in view of Tomasz et al. (previously cited in Office Action 1/21/04).

Regarding claim 1, Lee et al. discloses a signal processing system comprising:

a receiver for receiving (Fig. 4, block 405, column 3, lines 3-9) an incoming RF signal;

a pre select filter (Fig. 4, block 410, column 3, lines 23-38) connected to the incoming receiver for filtering the received incoming signal;

a low noise amplifier (Fig. 4, block 420, column 3, lines 23-38) connected to the pre select filter for amplifying the filtered incoming signal;

an image rejection filter (Fig. 4, block 425) connected to the low noise amplifier for rejecting predetermined images of the amplified incoming signal to thereby output an incoming signal;

Art Unit: 2634

a distributor (Fig. 4, block 460 and 465, column 3, lines 60-64) connected to the image rejection filter for distributing the input signal to one of at least two channels in a current mode of operation;

an intermediate frequency filter (Fig. 4, block 470, column 3, lines 63-66, wherein the filters are disposed in each channel as shown in Fig. 1) disposed in each of the two channels for processing the input signal and providing an output signal in response thereto, wherein the low pass filters act as intermediate frequency filters since they filter an intermediate frequency signal, and

a multiplexer (column 3, line 64-column 4, line 2, DSP) connected to the outputs of each IF filter for combining the signals output by each of the IF filters, wherein a DSP combines I and O signals output from ADC's (see Tomasz et al., Fig. 3, block 78, column 4, lines 58-67), and since multiplexers are well known in the art for combining signals, it would have been obvious that a multiplexer could have been included in the DSP.

Lee et al. does not disclose only one of the intermediate frequency filters are active at a time.

However, Tomasz et al. discloses filters disposed in each of multiple channels for processing a distributed signal and providing an output signal thereto, wherein the operations of the filters can be controlled by an external source (Fig. 3, block 102, column 4, lines 22-36). Controlling the operations of the filters by an external source would allow the tuning as well as activation/deactivation of the filters. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the signal processing system of Lee et al. with the filters of Tomasz et al. which would allow for allow the tuning as well as

Application/Control Number: 09/579,596

Art Unit: 2634

activation/deactivation of the processors. This would allow the system to save power with the activation/deactivation of the processors and create greater adaptability in the system by allowing the tuning of the filters.

Conclusion

- 8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Woo et al. (U. S. Patent No. 6, 125, 135) discloses distributing an input signal and performing automatic gain control on the distributed signals.
- 9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Curtis B. Odom whose telephone number is 703-305-4097. The examiner can normally be reached on Monday- Friday, 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Chin can be reached on 703-305-4714. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
